

What is claimed is:

1. A purifier with molecular-rearranging device,
comprising a hollow tubular holder, a tubular
5 molecular-rearranging device positioned in said
tubular holder, a tubular isolating layer positioned
in a bore of said tubular molecular-rearranging device,
and two caps respectively having a through hole closed
to two ends of said tubular holder; said tubular
10 isolating layer having an inner bore, through which
a pipe for liquid or exhaust may be extended via said
through holes on said two caps, whereby a liquid or
exhaust flown through said pipe having said purifier
mounted thereon is purified when molecules of said
15 liquid or exhaust are magnetized and rearranged by
magnetic forces produced by said molecular-rearranging
device.
